

ADERYN IMPACT INITIATIVE / STAKEHOLDER REVIEW

Rebuild understanding. Earn trust. Enable participation.

Kallah, Kajuru LGA, Kaduna State • A participant-level review of outreach reach, communication and engagement. Outcomes are self-reported; community-wide coverage and sustained adoption are not measured.

Selection: 200 of 200 records · 130 attendees · All rates below show their denominators.

Recorded people

200

200/200 in selection

Attendance

65.0%

130/200 recorded people

Clear understanding

28.5%

37/130 attendees

High / very high trust

19.2%

25/130 attendees

Meaningful participation

24.6%

32/130 attendees

Interpretation: 93 of 130 attendees did not report clear understanding; 64 reported low or very low trust. Diagnose communication and relationship gaps before expanding delivery. These associations do not prove causation.

Reach and engagement checkpoints

Counts share a recorded-person denominator. These are parallel checkpoints, not a sequential funnel.

Heard about outreach	168/200 · 84.0%
Attended	130/200 · 65.0%
Clear understanding	37/200 · 18.5%
High / very high trust	25/200 · 12.5%
Meaningful participation	32/200 · 16.0%

English proficiency → clear understanding

Clear / attending people in each proficiency group. Language proficiency is not interpreter exposure.

None	0/49 · 0.0%
Basic	8/45 · 17.8%
Conversational	16/22 · 72.7%
Fluent	13/14 · 92.9%

Understanding → high trust

High or very high trust / attendees in each understanding group.

Limited	2/30 · 6.7%
Partial	5/63 · 7.9%
Clear	18/37 · 48.6%

Trust → meaningful participation

Contributed to discussion or actively engaged / attendees in each trust group.

Very low	0/27 · 0.0%
Low	0/37 · 0.0%
Moderate	15/41 · 36.6%
High	12/17 · 70.6%
Very high	5/8 · 62.5%

Main concerns

One recorded main concern per person; share of filtered records.

Language barrier	36/200 · 18.0%
Need for clearer purpose explanation	33/200 · 16.5%
Did not hear about programme	32/200 · 16.0%
Need for elder engagement	27/200 · 13.5%
Household/time constraints	17/200 · 8.5%
No major concern	17/200 · 8.5%
Insufficient prior information	14/200 · 7.0%
Limited time for questions	14/200 · 7.0%
Concern about programme purpose	10/200 · 5.0%

Preferred communication channels

Preferences, not evidence of channel effectiveness; share of filtered records.

Local-language community meeting	67/200 · 33.5%
Women's group meeting	59/200 · 29.5%
School-based session	34/200 · 17.0%
Home/compound visit	24/200 · 12.0%
Radio announcement	16/200 · 8.0%

Who was reached?

Attendance by participant type; denominator is all recorded people in that group.

Girl	37/52 · 71.2%
Young woman	27/42 · 64.3%
Adult woman	59/96 · 61.5%
Community stakeholder	7/10 · 70.0%

Follow-up willingness

Intentions among filtered records; "Maybe" is not a commitment.

Yes	63/200 · 31.5%
Maybe	62/200 · 31.0%
No	75/200 · 37.5%
Mean satisfaction: 2.52/5 (130 rated attendees).	

Invitation channels: descriptive signals

Small, non-random groups. Differences may reflect participant characteristics; do not interpret as causal channel rankings.

Family member	26/30 · 86.7%
Field team invitation	19/29 · 65.5%
Friend/neighbour	27/39 · 69.2%
Not applicable	0/32 · 0.0%
Religious/community announcement	6/8 · 75.0%
Teacher/school contact	19/20 · 95.0%
Village/community leader	22/29 · 75.9%
Women’s group representative	11/13 · 84.6%

Proposed strategy—not an evaluated intervention. Consult women and girls directly alongside elders. Community endorsement must not replace voluntary participation, confidentiality or safeguarding.

01 / LISTEN

Weeks 1–2: repair relationships

Programme lead meets elders, women representatives, teachers and youth contacts separately. Clarify concerns and agree purpose, scope and feedback channels.

Output: documented stakeholder map and co-designed engagement plan.

02 / PREPARE

Weeks 2–3: localize the message

Engagement lead recruits trusted language facilitators. Validate language needs rather than assume one language fits all. Test translated explanations with women and girls.

Output: approved local-language messages, suitable time/venue and safe participation arrangements.

03 / PILOT**Week 4: small-group return**

Facilitators run an opt-in pilot, use teach-back, allow questions and avoid pressure to speak. Explain referral options and the limits of services.

Output: pilot learning review; modify before wider rollout.

04 / FOLLOW THROUGH**Weeks 5–8: test adoption**

M&E lead follows up with consent. Track repeat attendance and referral completion only where safe and relevant. Close the feedback loop and report changes.

Output: consent-based follow-up report and scale/modify decision.

Proposed pilot success criteria

Planning thresholds, not externally validated benchmarks. Confirm jointly before the pilot.

Measure	Baseline	Proposed pilot target
Clear understanding / attendees	37/130 · 28.5%	≥70%
High / very high trust / attendees	25/130 · 19.2%	≥50%
Meaningful participation / attendees	32/130 · 24.6%	≥40%
Language support available	Not measured	All requested language groups supported
Referral / repeat attendance	Not measured	Establish baseline; agree target later

Decisions for NGO stakeholders

- Approve a listening-and-pilot phase before another full outreach.
- Assign one accountable lead and local co-facilitators; four staff alone is not a tested staffing model.
- Resource interpretation, relationship-building, travel, safeguarding and follow-up. No budget or cost-effectiveness data is available.
- Require a pre-return review: language coverage, tested messages, voluntary consent arrangements, safe venue and feedback mechanism.
- Proceed, modify or pause based on pilot evidence and community feedback—not attendance alone.

▼ Definitions, scope and data-quality notes

- Source: supplied workbook, Clean Data sheet, 200 unique participant IDs. Outreach date and sampling method were not provided. All records are female, ages 13–65.
- Attendance: Attended / all recorded persons. The 200 records are not a community population denominator.
- Understanding, trust, participation and satisfaction use attendees only. 70 non-attendees are “Not assessed” / “Not rated,” not negative responses.
- Meaningful participation is an analytical proxy: contributed to discussion or actively engaged. Quiet participation is not necessarily absence of benefit.
- English proficiency “None” is retained as a valid category. Local-language preference does not establish interpreter use or language mismatch at person level.
- Communication preference and follow-up preference are identical in all 200 records; they are not independent supporting evidence.
- “Brainwashing” concern comes from the supplied narrative; the workbook records purpose concerns but does not measure belief in that exact claim.
- No baseline, comparison group, intervention exposure, male elder interview data or observed long-term adoption data. Associations cannot establish causality.
- Dashboard embeds categorical, de-identified records to work offline. Small-group filters may still create disclosure risk; use for authorized stakeholder review only.
- Strategy and targets are proposed. Plan view always uses full-sample baselines; evidence filters do not alter those baselines.

All stakeholder review • Evidence from supplied workbook only • Dashboard build: 7 October 2026 (not the outreach date)
